

#### Pressure-resistant version of the AGF 10.0 series

#### Description

Unlike the AGF 10.0, the AGF 10.0 D is pressure-resistant up to 10 bar positive pressure and is thus able to be used for applications with an absolute pressure value of up to 11 bar, e.g. to test compressed air filters and optical flow measurement procedures with positive pressure values of up to 10 bar.

Fig. 1: AGF 10.0 D The AGF series aerosol generators are able to atomize liquids with a binary nozzle. Fig. 2 presents a schematic arrangement of the AGF 10.0 D generator components:

# AGF 10.0 D

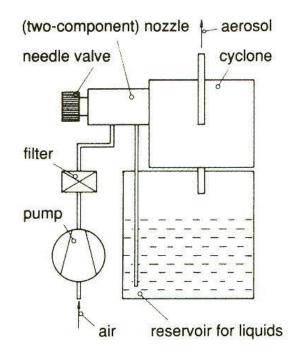

Fig. 2: Schematic diagram of the aerosol generator **Startup** Compressed air is supplied to a binary nozzle. The primary pressure on the nozzle is able to be adjusted to between 0 and 10 bar above the ambient pressure The volume flow through the AGF 10.0 D should be determined using a pressure-tight flow meter and must be between 12 and 22 L/min. The negative pressure in the nozzle suctions the liquid to be atomized from a reservoir, while the volume flow of this liquid is able to be adjusted using a needle valve that is incorporated into the nozzle.

	Dimensions WxHxD mm	Weight kg	∨ I/min	m <sub>max</sub> * g/h	dp <sub>mean</sub> *** µm	d <sub>max</sub> μm	115/230V 50/60 Hz	Pressure- tight up to 10 bar	Compressed air supply
AGF 2.0	300x330x240	ca. 9	6-17	4	0,25	2			x
AGF 2.0 iP	300x330x240	ca. 15	16-18	2	0,25	2	x

Table 1: Overview of the AGF and UGF systems

## AGF 10.0 D

#### **Benefits**

- Generation of high mass flows of up to approx. 25 g/h
- Exact adjustment of the operating parameters
- Number concentration  $(C_N)$  can be varied by the factor 10
- Particle size distribution remains virtually constant, if  $C_N$  is modified
- Number distribution maximum is within the MPPS range
- Virtually no power losses
- Optimal concentration, no coagulation losses
- Resistant to numerous acids, bases, and solvents
- Robust design, stainless steel housing
- Easy to operate
- Long dosing time

### Datasheet

Parameter	Description		
Volume flow	14 – 35 l/min		
Dimensions			
	200 • 300 mm (Ø • I)		
Weight			
	approx. 8 kg		
Particle material	DEHS, DOP, Emery 3004, paraffin oil, other non-resinous oils		
Dosing time			
	> 24 h		
Mass flow (particles)			
	< 20 g/h (DEHS)		
Compressed air connection	Quick coupling		
Aerosol outlet connection			
	$Ø_{inside} = 20 \text{ mm}, Ø_{outside} = 30 \text{ mm}$		
Special features	Draceure tight up to 10 hor		
Maan narticle diameter (number)	Pressure-tight up to 10 bar		
Mean particle diameter (number)	0.5 μm		
Biggest particle diameter			
	10 μm		
Filling quantity	300 ml		

## AGF 10.0 D

#### **Applications**

- Clean room technology
  - Acceptance tests and leak tests as per ISO 14644 and VDI 2083
  - Leak tests, fit testing
  - Recovery tests
- Filter testing, quality control
  - Filter cartridges
  - Car interior filters
  - Filter media, particulate air filters, HEPA/ULPA filters
  - Compressed air filters
- Tracer particles
  - Optical flow measurement procedures with positive pressure values of up to 10 bar (model version AGF 10.0 D)
  - Inhalation experiments
  - LDV
- Calibration of counting particle measurement methods
  - Nebulization of latex suspensions < 5 μm
- Smoke detector tests
