

MonoDust 1500

Monodisperse particles for calibration of particle measuring devices

Description

MonoDust 1500 is a calibration dust for fine dust monitoring devices and aerosol spectrometers with a very small monodisperse distribution. The dust consists of silicon dioxide and the particles have a size of 1.28 μm . Due to the small distribution width the dust is perfectly suited for calibration of measuring devices.

MonoDust 1500

Benefits

- Solid particles with very small monodisperse distribution
