RBG 1000 IGD

Separate dispersing unit and control unit, pressure-resistant at positive pressure values of up to 3 bar, optional low pressure operation from 300 mbar (absolute pressure)

Description

This device disperses particles at positive pressure values of up to 3 bar. Dispersing unit and electronic control unit able to be set up separately at a distance of up to 2 m from each other In addition, the return speed is very fast when switching out reservoirs. It is approx. 1 minute. Optional operation with low pressure from 300 mbar absolute is possible (please see accessories). **Please note**: The feed stock reservoirs with a diameter of 7, 10, 14 or 20 mm are pressure-resistant. For operation with low pressure special pressure-resistant feed stock reservoirs are needed. Their piston is strongly connected to the feeding unit by a claw. This enables an undisturbed operation with low pressure. Old RBG models can be upgraded with this function by Palas[®]. The feed stock reservoir with a diameter of 28 mm is not pressure-resistant, but can be used with the RBG 1000 IGD under atmospheric conditions. Nitrogen cannot be used as the dispersing gas in the pressure-resistant version of the RBG 1000.

Applications

- All applications pressure-resistant up to 3 barg overpressure
- Dispersion of radioactive substances
- Dispersion of pharmaceutical powders
- Filter industry:
 - Determination of fractional separation efficiency
 - Determination of total separation efficiency
 - Long-term dusting
 - Filter media and ready-made filters
 - Dust removal filters
 - Vacuum cleaners and vacuum cleaner filters
 - Car interior filters
 - Engine air filters
- Calibration of particle measurement devices
- Flow visualization
- Inhalation tests
- Tracer particles for LDA, PIV, etc.
- Coating of surfaces
